Project Overview

Canvas Diaries — User Registration Module

I developed the Canvas Diaries website as part of the EMC Full Stack Bootcamp B32, Week-04 Project 1, applying the concepts and skills I learned during the bootcamp.

The project includes a **Home Page, Registration Page, and Contact Page**, designed with a clean, pastel-themed UI and responsive layouts.

The registration page includes Name, Email, and Password fields with real-time JavaScript validation. Error messages are displayed for invalid inputs, and the submit button remains disabled until all fields meet the required conditions. I also implemented responsive navigation with a mobile drawer for smaller screens.

Through this project, I applied HTML5, CSS3, responsive media queries, JavaScript DOM manipulation, event handling, and form validation to create a functional and user-friendly website.
